

Project 2- Netflix / Media Dataset EDA

Objective

The objective of this project is to perform exploratory data analysis on a movie/media dataset to identify trends in content production, genre popularity, ratings, and overall distribution patterns using Python and data visualization techniques.

Dataset Overview

The dataset contains information about movies including:

- Title
- Release date
- Genre
- Popularity score
- Vote average
- Language

Data cleaning and preprocessing were performed before analysis.

Analysis and Visualizations

1. Top 10 Most Popular Movies

This chart displays the top 10 movies based on popularity score.

A horizontal bar chart was used for better readability of movie titles and clear comparison.

Insight:

Certain blockbuster movies dominate popularity scores, indicating strong audience engagement and visibility.

2. Top Movie Genres

This chart shows the most common genres in the dataset using a bar chart.

**Insight:**

Drama, Comedy, and Action are the most frequent genres, indicating strong audience demand for these categories.

3. Language Distribution

This visualization shows the number of movies by original language.

Insight:

English-language content dominates the dataset, with significantly fewer movies in other languages.

4. Yearly Content Growth

A line chart was used to visualize the number of movies released per year.

Insight:

Movie production increased rapidly after the year 2000, showing strong growth in the entertainment industry.

5. Popularity Distribution

Histogram showing distribution of popularity scores.

Insight:

Most movies have low to moderate popularity, while only a few achieve extremely high popularity.

6. Vote Average Distribution

Histogram of movie ratings.

Insight:

Most movie ratings fall between 5 and 7, indicating average audience reception.

Tools Used

- Python
- Pandas
- Matplotlib

Conclusion

This analysis highlights key trends in movie production and audience preferences. The number of movies released has grown significantly over time, with Drama and Comedy being the most dominant genres. Most films receive moderate ratings, and popularity is concentrated among a small number of highly successful movies.

Data visualization techniques helped in clearly identifying patterns and insights from the dataset.
